## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on LED Aluminum Profile competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global LED Aluminum Profile production reached approximately 62 million Kilometers, with an average global market price of around US\$ 25 per meter. LED Aluminum Profile, also known as an LED extrusion or LED channel, is a specially designed housing solution made of high-quality aluminum alloy that provides structural support, thermal management, and aesthetic enhancement for LED strip lights. The aluminum body serves as a durable protective casing that shields the LED strips from dust, moisture, and mechanical damage, while simultaneously acting as a heat sink to dissipate excess heat generated during operation. This heat management extends the lifespan and maintains the luminous efficiency of LEDs. In addition, LED aluminum profiles are often integrated with diffusers made of polycarbonate (PC) or acrylic, which help achieve uniform light distribution, reduce glare, and eliminate visible LED hotspots. By combining functionality, durability, and modern design, LED aluminum profiles have become an essential component in architectural lighting, interior decoration, and commercial illumination systems.

The global LED Aluminum Profile market size was estimated at USD 1560.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
