Abstracts

LED daytime running lights (DRLs) are energy-efficient automotive lighting systems designed to enhance vehicle visibility during daylight hours, primarily as a safety feature to reduce the likelihood of collisions by making vehicles more conspicuous to other road users. These lights utilize light-emitting diode (LED) technology, which offers advantages such as low power consumption, long lifespan, rapid illumination, and compact design, allowing for innovative integration into vehicle aesthetics. Unlike headlights, DRLs operate automatically when the engine is running and are intended solely for daytime use, complying with regional regulations that often mandate their inclusion in new vehicles. The market encompasses both original equipment manufacturer (OEM) installations and aftermarket retrofitting options, catering to consumer demand for safety, style, and regulatory compliance.

The global Led Daytime Running Light market size was estimated at USD 4050.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
