Abstracts

A LED driver is an electronic power regulation device that supplies constant current or constant voltage to LED lighting systems, ensuring stable operation, protecting against voltage fluctuations, and often enabling dimming or smart control functionality; an electronic ballast serves a similar purpose for fluorescent lamps by regulating current to provide efficient ignition and operation while eliminating flicker and hum associated with magnetic ballasts. Both devices are essential components in modern lighting systems, with LED drivers tailored for solid-state lighting applications and electronic ballasts designed for fluorescent technologies, though the market is increasingly dominated by LED solutions due to energy efficiency trends and regulatory shifts away from less efficient lighting types.

The global Led Drivers And Ballasts market size was estimated at USD 11250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
