Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on LED Grow Lamp for Indoor Plant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global LED Grow Lamp for Indoor Plant production reached approximately 84 million units with an average global market price of around US\$ 20 per unit, a single-line production capacity of approximately 150,000 units/year, and a gross profit margin of approximately 10%-30%. LED Grow Lamp for Indoor Plant is an advanced artificial lighting system designed to stimulate photosynthesis and promote healthy plant growth in indoor or controlled environments where natural sunlight is limited or unavailable. It utilizes light-emitting diodes (LEDs) to emit specific wavelengths of light that match the spectral requirements of plants at different growth stages, including germination, vegetative development, flowering, and fruiting. Compared with traditional lighting sources such as fluorescent or high-pressure sodium lamps, LED grow lamps offer superior energy efficiency, lower heat generation, longer lifespan, and customizable light spectra. The upstream segment primarily involves the production of key raw materials and components, including LED chips, optical lenses, aluminum heat sinks, circuit drivers, and housing materials. The midstream segment focuses on product design, assembly, testing, and system integration, where manufacturers develop full-spectrum or customized-spectrum grow lamps with advanced control and thermal management technologies. The downstream segment includes the distribution, installation, and application of finished LED grow lamps in home gardening, greenhouse cultivation, vertical farming, and research laboratories.

The global LED Grow Lamp for Indoor Plant market size was estimated at USD 1681.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

4.10% during the forecast period.
