Abstracts

Hydroponic grow lights are artificial light sources designed to facilitate plant growth in indoor or controlled environment agriculture (CEA) systems by emitting specific wavelengths of light optimized for photosynthesis, replacing or supplementing natural sunlight. These systems are essential for year-round cultivation, enabling precise control over light intensity, spectrum, and photoperiod to maximize crop yield, quality, and consistency across various plant types, from leafy greens and herbs to high-value flowering crops. The technology has evolved significantly with the adoption of light-emitting diodes (LEDs), which offer superior energy efficiency, longer lifespans, reduced heat output, and tunable spectra compared to traditional lighting such as high-pressure sodium (HPS) or fluorescent lights, allowing growers to tailor light recipes to specific growth stages?vegetative, flowering, or fruiting?enhancing both physiological development and resource use efficiency.

The global Led Hydroponic Grow Lights market size was estimated at USD 650.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
