LED IR illuminators are the most common illuminators on the market. An LED is a semiconductor light source that emits light when current flows through. LED infrared illuminators feature one or more Light Emitting Diodes (LEDs) which produce the infrared light. Increasing security requirements for surveillance applications are driving the demand for IR LEDs, and in recent years, surveillance cameras with integrated IR LED lighting have been increasingly used to provide clear images in total darkness. The continued need for surveillance in various industries such as transportation, public safety, and commercial security is also driving the deployment of infrared LEDs. Rapid advancements in security technologies across industries will also benefit the industry. The increasing adoption of MWIR LEDs in the defense sector to facilitate market growth and the urgent need for improved precision targeting and situational awareness and effective countermeasures have expanded the deployment of MWIR technology across the defense sector. Technological advances have made these LED systems more efficient, reliable and cost-effective, which has also expanded their range of applications. Hence, increasing deployment of artificial intelligence solutions for defense purposes will boost business growth. There is a growing number of initiatives to facilitate smart city operations. IR LED sensors are being used more and more in traffic management systems due to the growing need to recognize the presence of cars and pedestrians, as well as the growing popularity of smart building systems. Ongoing obligations to improve energy efficiency and monitor occupancy will also play a key role in regional industrial proliferation.

The global LED IR Illuminators market size was estimated at USD 7516.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
