### Report Overview

LED Light Bulbs [LED Lighting] is a kind semiconductor light-emitting solid device, which can convert the energy from an electric current into light.

### LED Light Bulbs Principles:

Terminal voltages of PN junctions form certain barrier potentials, and when the forward bias voltage is added, the barrier potential decreases and most charge carriers in P area and N area diffuse to each other. As the electron mobility is much higher than the holes mobility, large amount of electrons diffuse to P area, causing charge carriers entering P area. These electrons combine with the holes on the valence band with energy emission in the form of light.

Global giant manufactures mainly distributed in China and Europe. Osram and Philips captured the top two revenue share spots in the LED Light Bulbs market. MUSASHI dominated with 7% production volume share, followed by Philips with 6% production volume share.
