## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on LED Poultry Lighting competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global LED poultry lighting production reached approximately 8 million units, with an average global market price of around US\$ 33.5 per unit. LED Poultry Lighting utilizes light-emitting diode (LED) technology to design a professional lighting system that can precisely control parameters such as spectral composition, light intensity, lighting duration, and flicker frequency based on the biological characteristics and breeding needs of poultry. This system aims to optimize poultry's visual perception, circadian rhythm, behavioral performance, and physiological functions (such as improving feed conversion rate, enhancing immunity, increasing egg production, or promoting fattening). Ultimately, it achieves a comprehensive lighting solution that improves breeding efficiency, ensures the quality of poultry products, reduces energy consumption and operating costs, and promotes the development of intelligent and refined poultry farming.

The global LED Poultry Lighting market size was estimated at USD 268.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
