Abstracts

An LED Sending Card, also known as an LED controller card, is an essential component of an LED display system, particularly in large-scale LED video walls and signage installations. Its primary function is to receive video or image data from a video source (such as a computer or media player), process this data, and then send it to the individual LED display modules or tiles that make up the LED display screen. LED Sending Cards are a crucial part of ensuring that the content is properly displayed on the LED screen in a coordinated and synchronized manner.

Growth in Digital Signage: The use of LED display screens in digital signage applications continues to expand, driving demand for LED Sending Cards. Digital signage is widely used in retail, transportation, hospitality, and other sectors for advertising, information dissemination, and interactive displays.

Fine Pixel Pitch (FPP) Displays: The demand for fine pixel pitch LED displays, which offer higher resolution and image quality, is increasing. These displays require advanced LED Sending Cards to manage the data and maintain image clarity.

4K and 8K Resolutions: As 4K and 8K resolutions become more common, LED Sending Cards are adapting to support these higher video resolutions for enhanced visual experiences.

High Dynamic Range (HDR): There is a growing interest in HDR technology for LED displays, providing a wider range of colors and improved contrast. LED Sending Cards need to support HDR content.

Interactive and Touchscreen Displays: Interactive LED displays and touchscreen applications are becoming popular in various sectors, such as education, retail, and corporate settings. Sending Cards may need to support touch and gesture controls.

The global LED Sending Card market size was estimated at USD 1286.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
