Abstracts

Traditional LED screens are usually rectangular or square, with relatively fixed shapes, which cannot adapt to various complex installation environments and display requirements. Special-shaped LED display screens break through this limitation and can be made into various non-traditional shapes, such as arc, circle, wave, etc. This diverse design allows special-shaped LED display screens to better integrate into various scenes and achieve more personalized display effects. In addition, the modular design of special-shaped LED display screens also brings it greater flexibility. Each module can work independently, so it can be freely combined and spliced ??according to actual needs to realize the production of display screens of different sizes and shapes. Such a design not only makes the production process of special-shaped LED display screens simpler, but also greatly increases its application range.

The global LED Special-shaped Creative Screen market size was estimated at USD 5633.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
