Abstracts

Led special solder paste is a specialized formulation of solder paste designed specifically for use in the assembly of light-emitting diode (LED) components, particularly in surface-mount technology (SMT) applications. It is engineered to address the unique thermal and mechanical requirements of LED packages, which often involve heat-sensitive materials and the need for strong adhesion to withstand thermal cycling. Key characteristics include low voiding to ensure optimal thermal conductivity for heat dissipation, high reflectivity to enhance light output by minimizing light absorption, and compatibility with various substrates such as aluminum, ceramic, or metal-core printed circuit boards (MCPCBs). The paste typically contains alloys like SAC (tin-silver-copper) with tailored flux systems that prevent corrosion and oxidation while providing excellent wetting properties for reliable solder joints, ensuring both electrical connectivity and mechanical stability in high-brightness or high-power LED applications.

The global Led Special Solder Paste market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
