Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on LED Spherical Screen competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Spherical LED screen, also known as LED spherical screen, is an innovative LED display technology with the characteristics of 360-degree non-dead angle display and spherical characteristics. This display is widely used in commercial shopping centers, museums, international exhibitions, transportation stations and large hotels, and has become the focus of attention. LED spherical screens are mainly divided into the following categories according to the structural type: Watermelon skin ball screen: This is the earliest LED spherical screen on the market, composed of PCBs similar to the shape of watermelon skin. Its structure is intuitive and easy to make, but the disadvantage is that the north and south poles (or north of 45° north latitude and south of 45° south latitude) cannot play images, and the picture utilization rate is low. This screen has a certain share in the initial market, but with the continuous advancement of technology, its application scope has gradually been limited. Triangular ball screen (football screen): Unlike the watermelon skin ball screen, the triangular ball screen is composed of a flat triangular PCB, which successfully overcomes the disadvantage that the watermelon skin ball screen cannot play images at the north and south poles, and the picture utilization rate is greatly improved. However, the production of this type of screen is relatively complicated, there are many types of PCBs, and the pixels are arranged in a honeycomb shape, resulting in a dot pitch of no less than 8.5mm. The software writing is also complicated, and the technical threshold is high. Six-sided panoramic ball screen: The six-sided panoramic ball screen is composed of quadrilateral PCBs, with relatively few types of PCB boards and a low production threshold. Its layout is closer to a flat LED display screen, with little limit on the minimum

dot pitch and excellent display effect. The entire ball screen is composed of 24 spherical surfaces of the same size, which is easy to disassemble and assemble, and convenient for rental and use. This screen can not only provide a 360-degree panoramic view, but also divide a ball screen into 6 identical screens (up, down, left, right, front, and back), or play different video sources separately or jointly through software, with extremely high flexibility and practicality.

The global LED Spherical Screen market size was estimated at USD 527.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
