Abstracts

An LED underwater flashlight is a specialized waterproof illumination device designed for use in submerged or aquatic environments, utilizing light-emitting diodes (LEDs) as the primary light source. These flashlights are engineered with robust sealing mechanisms, such as O-rings and pressure-resistant casings, to prevent water ingress at specified depth ratings, often measured in meters or ATM (atmospheres). Key features typically include high lumen output for visibility in low-light conditions, multiple lighting modes (e.g., steady, strobe, SOS), corrosion-resistant materials like anodized aluminum or marine-grade plastics, and efficient power sources, such as rechargeable lithium-ion batteries or disposable cells. They are optimized for durability, thermal management, and beam distance, with variations tailored for recreational diving, professional underwater work, fishing, emergency rescue, and marine exploration, distinguishing them from standard LED flashlights by their enhanced waterproof integrity and performance under hydrostatic pressure.

The global Led Underwater Flashlight market size was estimated at USD 35.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
