Legacy application modernization service refers to the process of updating and enhancing outdated software applications—often built on older technologies, architectures, or platforms—to improve their performance, security, scalability, and compatibility with modern systems, while preserving their core business value. These services typically involve strategies such as rehosting (migrating to the cloud or new infrastructure), refactoring (optimizing code for efficiency), rebuilding (rewriting with modern frameworks), replatforming (upgrading the underlying platform), or retiring obsolete components.
