Abstracts

This studies the legacy chips wafer foundry, including 28nm, 40/45nm, 55/65nm, 90nm, 0.13µm/0.15µm, 0.18/0.15µm, and above 0.25 µm, etc.Legacy chips, typically manufactured using nodes larger than 28nm, might not boast the same processing power or efficiency as their more advanced counterparts, but they are the workhorses of the global tech ecosystem. These chips are ubiquitous, powering everything from automotive electronics and industrial machinery to household appliances and critical infrastructure systems.Automotive Industry: Legacy chips are integral to the functioning of vehicles, managing everything from engine control units to infotainment systems and advanced driver-assistance systems (ADAS). The ongoing global chip shortage has starkly demonstrated the automotive sector’s dependence on these semiconductors.Industrial Automation: Many automation and control systems in factories and manufacturing plants rely on legacy chips for reliable performance and cost-effectiveness. These chips ensure smooth operations in environments where cutting-edge technology might be unnecessary or too expensive.Consumer Electronics: From microwaves and washing machines to televisions and gaming consoles, legacy chips are embedded in countless consumer products, enabling the functionality and features that users have come to expect.Infrastructure and Defense: Older semiconductor technologies are often found in critical infrastructure and defense applications due to their established reliability and long lifecycles, which are crucial for mission-critical uses.

The global Legacy Chips Wafer Foundry market size was estimated at USD 60790.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
