Abstracts

Legacy microcontrollers refer to older-generation, often 8-bit or 16-bit, microcontroller units (MCUs) that remain in production and use despite the availability of more advanced architectures, typically due to their proven reliability, long-term availability, low cost, extensive software and hardware ecosystems, and compatibility with established designs in industries where upgrading carries high risks or costs. These devices are characterized by mature manufacturing processes, stable toolchains, and long product lifecycles, often spanning decades, making them critical for applications in automotive systems, industrial controls, medical devices, and consumer electronics where design longevity, supply chain predictability, and minimal requalification efforts are prioritized over raw processing power or energy efficiency.

The global Legacy Microcontroller market size was estimated at USD 3025.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
