Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lens Materials With Refractive Index Above 1.56 competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of lens materials with a refractive index of 1.56 or higher will reach 225,000 tons, with an average selling price of \$2,000 per ton. Lens materials with a refractive index higher than 1.56 are optical materials with a high light-refractive power. These materials, through optimized molecular structure or specialized processing, deflect light more strongly as it passes through the lens. This significantly reduces lens thickness and weight while maintaining the same corrective effect, improving wearer comfort and aesthetics. Common refractive indices include 1.60, 1.67, 1.71, and 1.74.

The global Lens Materials With Refractive Index Above 1.56 market size was estimated at USD 450.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
