Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Letter Sorting Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A letter sorting machine is an automated postal system used to efficiently sort large volumes of letters and mail items based on destination, size, or postal code. It plays a central role in postal services, courier companies, and corporate mailrooms, where high-speed and accurate sorting is essential for timely mail delivery. The system typically consists of feeder modules, optical character recognition (OCR) scanners, barcode readers, and sorting bins or conveyors. As letters enter the machine, they are automatically aligned, scanned, and identified; the system then directs each piece to the appropriate output tray or route based on the scanned address or code. In 2024, global letter sorting machine production reached approximately 27.45 k units, with an average global market price of around US\$ 21,533 per unit. And global letter sorting machine production capacity reached approximately 32 k units. The average gross margin in this industry reached 26.58%. Upstream: The letter sorting machine industry relies on optical recognition systems, precision mechanical conveyors, high-speed actuators, and embedded control electronics. Core upstream components include industrial cameras, barcode and OCR scanners, servo motors, and PLC controllers. Key raw materials include aluminum frames, stainless-steel rollers, and wear-resistant belts. Manufacturing integrates image recognition calibration, motion control programming, and ergonomic mechanical design for continuous, high-speed mail processing. Representative upstream suppliers include Keyence (machine vision components), Siemens (motion control and PLC systems), and Omron (sensors and automation modules). Upstream innovation focuses on improving recognition accuracy, miniaturizing hardware, and enhancing energy efficiency to meet postal system

modernization demands. Downstream: Letter sorting machines are mainly used by national postal services, logistics companies, and express delivery providers for automated mail handling and route classification. They significantly improve sorting efficiency, traceability, and labor cost management. Representative downstream companies include Siemens Logistics (postal automation systems), Toshiba Infrastructure Systems (mail sorting solutions), and Pitney Bowes (mail processing equipment). With the growing digitalization of logistics and e-commerce, downstream demand is shifting toward AI-driven sorting platforms capable of real-time address recognition, RFID integration, and adaptive route optimization to support high-volume, mixed-format mail and parcel operations.

The global Letter Sorting Machine market size was estimated at USD 591.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
