Report Overview

Li-ion Battery Energy Storage Systems (ESS) refer to a type of energy storage system that uses lithium-ion batteries as the primary energy storage medium. Li-ion batteries are a type of rechargeable battery technology that uses lithium ions as the charge carriers to store and release energy. Li-ion Battery ESS is a flexible and scalable technology that can be used for a wide range of applications, including commercial and industrial facilities, residential properties, telecommunications, uninterruptible power supply (UPS), and portable energy storage. The ESS comprises of several components, including the Li-ion batteries, power conversion systems, control and monitoring systems, and safety mechanisms. The batteries store excess energy during off-peak periods and release it during peak demand periods or when the grid is unavailable. Li-ion Battery ESS can provide several benefits, including energy bill savings, backup power, time-of-use optimization, power quality improvement, carbon footprint reduction, and grid independence. The technology is becoming increasingly popular as renewable energy sources such as solar and wind become more prevalent, enabling homes and businesses to store and use excess renewable energy generated on-site. In this report, lithium batteries refer to lithium battery cells, modules and battery packs sold by manufacturers to energy storage system integrators or energy storage system EPCs and investors.
