Abstracts

The market for lithium-ion batteries for electric vehicles (EVs) represents a critical and rapidly expanding segment of the global energy storage and automotive industries, driven by the widespread transition toward electrified transportation as a means to reduce greenhouse gas emissions and dependence on fossil fuels. These rechargeable batteries, characterized by their high energy density, long cycle life, and decreasing cost profiles, serve as the primary power source for battery electric vehicles (BEVs), plug-in hybrid electric vehicles (PHEVs), and hybrid electric vehicles (HEVs), with key chemistries including lithium nickel manganese cobalt oxide (NMC), lithium iron phosphate (LFP), and emerging alternatives like lithium nickel cobalt aluminum oxide (NCA). Market dynamics are heavily influenced by advancements in battery technology?such as improvements in energy density, charging speed, and safety?coupled with supportive government policies, subsidies, and regulations promoting zero-emission vehicles, alongside growing consumer acceptance and expanding charging infrastructure. Major players encompass battery manufacturers like CATL, LG Energy Solution, Panasonic, and Samsung SDI, as well as automotive OEMs vertically integrating into battery production, while supply chain considerations around raw materials (e.g., lithium, cobalt, nickel) and geopolitical factors add layers of complexity to pricing, availability, and strategic sourcing. The market is poised for sustained growth, supported by declining battery costs, increasing vehicle model availability, and global commitments to decarbonize transport, though it faces challenges related to resource scarcity, recycling, safety standards, and the need for continued innovation to meet performance and sustainability targets.

The global Li Ion Battery For Evs market size was estimated at USD 212500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 17.50% during the forecast period.
