Report Overview

Battery charger ICs are integrated circuits (IC) that are used to charge batteries. Important features for battery charger ICs include over-voltage protection and over-current protection. Devices with a soft-start feature condition the battery for several minutes before performing a fast charge. Devices with a charge status indicator have a built-in monitor that displays the amount of current supplied and/or the amount of charge applied. In response to concerns about the environmental impact of using lead (Pb) in solder finishes, some battery charger ICs do not contain lead in any form.

The global Li Ion Battery Charge Management Ics market size was estimated at USD 1584.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
