Lidar (Light Detection and Ranging) is a remote sensing technology that uses laser pulses to measure distances and generate high-resolution three-dimensional maps of the surrounding environment, enabling autonomous vehicles to accurately perceive and navigate their surroundings by detecting objects, obstacles, road boundaries, and other critical features in real-time, regardless of lighting conditions. This technology operates by emitting rapid laser beams and measuring the time it takes for the light to return after reflecting off surfaces, creating precise point cloud data that forms the basis for the vehicle's spatial awareness and decision-making systems, making it an essential sensor suite component for achieving higher levels of automation in self-driving cars.
