Abstracts

LiDAR cover is a protective device installed on the outside of LiDAR. It is mainly used to protect the internal precision optical components and electronic components from environmental damage, such as rain, dust, collision and extreme temperatures. It is usually made of highly transparent materials to ensure that the emission and reception of laser pulses are not interfered with, and it must also have weather resistance (anti-ultraviolet, anti-corrosion) and mechanical strength. The design focuses on aerodynamic shape to reduce wind resistance, and may add anti-fouling coating or heating function to prevent fogging or snow accumulation.

The global LiDAR Cover market size was estimated at USD 117.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global LiDAR Cover market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
