Abstracts

Lidar is a radar system that detects the position, velocity and other characteristics of the target by emitting a laser beam. Its working principle is to send detection signal (laser beam) to the target, and then compare the received signal (target echo) reflected from the target with the transmitted signal. After proper processing, relevant information of the target can be obtained, such as the target distance, orientation, height, speed, attitude, and even shape, so as to detect, track and identify the target, Lidar laser is the core device of lidar, which is used for laser light source.
