Report Overview:

Lidar is a surveying method that measures distance to a target by illuminating the target with pulsed laser light and measuring the reflected pulses with a sensor. Differences in laser return times and wavelengths can then be used to make digital 3-D representations of the target. The name lidar, now used as an acronym of light detection and ranging (sometimes light imaging, detection, and ranging), was originally a portmanteau of light and radar. Lidar sometimes is called laser scanning and 3-D scanning, with terrestrial, airborne, and mobile applications.

The Global LiDAR Technology Market Size was estimated at USD 1703.56 million in 2023 and is projected to reach USD 3546.73 million by 2029, exhibiting a CAGR of 13.00% during the forecast period.
