Report Overview

Lidocaine is a widely used local anesthetic that provides temporary numbing and pain relief by blocking nerve signals in a specific area of the body. It is commonly administered via injection, topical application, or as a patch. Lidocaine works by inhibiting the sodium channels in nerve cells, thereby preventing the initiation and propagation of nerve impulses. This makes it effective for a variety of medical procedures, including dental work, minor surgeries, and the treatment of localized pain. Its rapid onset and intermediate duration of action make lidocaine a versatile choice in both acute and chronic pain management. Additionally, lidocaine is often combined with other agents to prolong its effects and reduce systemic toxicity.
