Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lift-off Photoresist for LED competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global Lift-Off Photoresist for LSI production will reach more than 80,000 liters, with an average selling price of US\$2,400 per liter. Lift-off photoresist is a specialized lithographic material used for patterning metals or functional films, widely applied in LED chip fabrication. The process involves forming a photoresist layer with an undercut profile on the substrate; after metal deposition, the resist is dissolved to remove excess metal, leaving fine electrodes, interconnects, or structural patterns. This technique avoids damage associated with direct metal etching, making it particularly suitable for high-precision, heat-resistant, and highly reflective electrode formation. In the LED manufacturing industry chain, lift-off photoresist involves upstream suppliers of photoresist raw materials, solvents, developers, and precision coating and exposure equipment. The midstream consists of photoresist manufacturers and packaging houses, integrating formulations with coating processes to meet micron and submicron patterning requirements. Downstream applications include LED chips, optoelectronic devices, and micro-phonic components, where the photoresist is used for high-precision patterning of metal electrodes, transparent conductive layers, and microstructures. The entire chain is characterized by high value-add, technology intensity, and trends toward high-resolution, heat-resistant, environmentally friendly photoresists, with deep integration into Micro-LED and hybrid photonics applications.

The global Lift-off Photoresist for LED market size was estimated at USD 197.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
