Abstracts

Lift refurbishment refers to the process of fully or partially repairing, updating and upgrading old or damaged elevators to improve their performance, safety and service life. As the elevator is used for a longer time, its electrical system, mechanical parts, hoistway structure and safety devices may gradually age or become damaged, resulting in reduced elevator operating efficiency and increased failure rate, which may even endanger passenger safety in serious cases. Therefore, it is necessary to refurbish old elevators, which can effectively extend the service life of the elevator and improve its operating efficiency and safety.
