### Report Overview:

A trolley suspension system comprises a trolley support frame being an elongated member at the ends of which are roller brackets, each bracket supporting a trolley wheel, typically a wheel known as a diablo wheel of which the periphery is waisted so as to define a diablo shape, and the diablo rollers simply run on a round section support rail. The diablo wheel may be in relatively rotatable parts. The trolleys may run on the support rail under power, or they may run under gravity, or they may be propelled by hand, and in any one system a combination of such propulsion arrangements may be used, but in any case the trolleys are required to run freely on the support rail for the transport of the articles between different operating locations.
