The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Light Channel System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global light channel system production reached approximately 7213 k units, with an average global market price of around US\$ 65 per unit. The light channel system is a linear lighting system with LED light sources as the core. Through aluminum profile channels, diffuser covers, reflectors and electrical drive modules, the light sources are guided and evenly distributed to achieve continuous, soft and efficient lighting effects. It is widely used in architectural decoration lighting, commercial space display, industrial plant lighting, traffic facilities and stage lighting, etc., with flexible installation, simple appearance, high light efficiency and energy saving and environmental protection characteristics. The annual production capacity of a single light channel system line typically ranges from 8,000 to 10,000 units per year, with a gross profit margin of approximately 28%. Downstream consumption of light channel systems is 45% for industrial use and 55% for commercial use.

The global Light Channel System market size was estimated at USD 469.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
