Report Overview

A light-curing conformal coating is a thin protective material applied to a printed circuit board (PCB) to which plug-in components have been soldered. It can enhance the moisture-proof and anti-fouling ability of electronic circuits and components and prevent solder joints and conductors from being corroded. In addition, the coating protective film is also beneficial to the friction resistance and solvent resistance of the circuit and components, and can release the pressure caused by the cyclic temperature change, improve the stability of electronic products, and prolong the service life. In addition to being used in the electronics industry, conformal coatings have a wide range of applications in the automotive industry, aerospace industry, defense industry, and bioengineering.

The global Light Curable Conformal Coatings market size was estimated at USD 385.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
