Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Light-Cured Calcium Hydroxide Liner Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Light-cured calcium hydroxide base liner materials are dental functional compounds designed to protect the pulp, promote secondary dentin formation, and provide an insulating base layer beneath restorative fillings. They are primarily composed of calcium hydroxide, light-curable resin matrices (such as Bis-GMA and UDMA), inorganic fillers, and photoinitiators. Combining the bioactivity of calcium hydroxide with the convenience of light-curable systems, the material forms a high-pH protective barrier on the pulp surface after curing, stimulating dentin regeneration while ensuring strong mechanical support and effective sealing. In the supply chain, key raw materials include medical-grade calcium hydroxide powder, acrylic resin monomers, nano-fillers, and photoinitiator systems. Downstream customers mainly include dental hospitals, clinics, and distributors of restorative materials. Typical clinical-grade products achieve 30%-40% gross margins, while advanced formulations (e.g., nano-calcium hydroxide or dual-cure systems) can reach 50%-55%. Market growth is driven by the increasing number of restorative dental procedures and the demand for fast-curing, biocompatible materials. Future trends focus on low-irritation resin systems, sustained calcium ion release, and composite materials with both antibacterial and biodegradable properties. In 2024, global production of light-cured pulp capping base materials reached approximately 35 million units, with an average global market price of around US\$ 2.5 per unit.

The global Light-Cured Calcium Hydroxide Liner Materials market size was estimated at USD 87.61 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 6.80% during the forecast period.
