Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Light-Cured Direct Pulp Capping Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Light-cured direct pulp capping materials are functional resin-based compounds used to cover exposed dental pulp, promote dentin regeneration, and prevent bacterial penetration. They mainly consist of light-curable resin matrices (such as HEMA and Bis-GMA), bioactive fillers like calcium silicate or calcium phosphate ceramics, photoinitiators, and antibacterial additives. These materials polymerize rapidly under blue light, offering excellent biocompatibility, sealing ability, and clinical handling, making them an upgraded alternative to conventional calcium hydroxide capping agents. In the supply chain, the key raw materials include high-purity acrylic monomers, nano bioactive fillers, and photoinitiator systems. Major producers are based in the U.S., Europe, and Japan (e.g., 3M, Ivoclar, GC), while China and South Korea serve as mid-range OEM and regional brand suppliers. Downstream customers mainly include dental hospitals, clinics, and distributors of restorative materials. Products typically achieve 35%-45% gross margins, the market demand is concentrated in North America, Europe, and Asia-Pacific, with particularly strong growth in China and India. In 2024, global production of light-cured direct pulp capping materials reached approximately 25 million units, with an average market price of around US\$ 3 per unit.

The global Light-Cured Direct Pulp Capping Materials market size was estimated at USD 71.76 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
