Abstracts

Light curing adhesives are a specialized class of photo-reactive polymer materials that remain liquid until exposed to specific wavelengths of light?typically ultraviolet (UV) or visible blue light?initiating rapid polymerization and curing into a solid state within seconds. These adhesives are formulated as one-part systems, eliminating the need for mixing, and offer high precision, low shrinkage, and excellent bond strength to substrates like glass, metals, plastics, and ceramics. Their curing is controllable and on-demand, making them ideal for applications requiring fast processing, automation, and minimal heat emission or solvent release. Key variants include acrylate, epoxy, and silicone-based chemistries, each tailored for properties such as flexibility, optical clarity, or chemical resistance.

The global Light Curing Adhesives market size was estimated at USD 1085.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
