Report Overview

Light diffusion additive is a substance that is added to materials or coatings to scatter or diffuse light. It is used to reduce glare, improve light distribution, and create a more uniform appearance. Light diffusion additives can be incorporated into various products such as paints, plastics, films, and coatings. They work by scattering the light that passes through the material, which helps to eliminate hotspots and create a softer, more diffused light. This can be particularly useful in applications such as lighting fixtures, display panels, signage, and optical devices where a uniform and visually pleasing light distribution is desired.
