Abstracts

A lightweight electric wheelchair is an electric assistive mobility device designed for easy carrying and transportation, aiming to provide a convenient travel solution for people with limited mobility. Compared with traditional electric wheelchairs, lightweight electric wheelchairs are usually made of lighter materials (such as aluminum alloy or carbon fiber), are lighter in weight and more compact in structure. This makes them easy to fold, disassemble and carry, and are very suitable for users who need to go out, travel or use public transportation frequently. Despite their small size, lightweight electric wheelchairs are still equipped with a reliable electric drive system to ensure that users can move freely in various environments while providing sufficient endurance to meet daily needs. In addition, this type of wheelchair is designed with a focus on comfort and ease of operation, allowing users to operate independently and enjoy greater autonomy in life. The development trend of electric wheelchairs is moving towards intelligence, personalization and multifunctionality. In the future, electric wheelchairs will integrate more advanced technologies, such as artificial intelligence, the Internet of Things and sensor technology, to achieve functions such as automatic obstacle avoidance, path planning and health monitoring, greatly improving user experience and independent living ability. With the advancement of material science, electric wheelchairs will become lighter, more durable and easier to fold and carry, making it easier for users to switch between different scenarios. In addition, in order to meet diverse needs, product design will pay more attention to personalized customization and provide options for different physical conditions and lifestyles. These innovations not only improve the functionality and comfort of electric wheelchairs, but also bring more convenience and dignity to users.

The global Light Electric Wheelchairs market size was estimated at USD 289.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50%
