Abstracts

Light Electrical Vehicles (LEVs) refer to low-speed, battery-powered personal transportation devices designed for short-distance urban and suburban mobility, typically characterized by their compact size, energy efficiency, and minimal environmental impact; this category includes electric bicycles (e-bikes), electric scooters (e-scooters), electric skateboards, and electric mopeds, which are generally regulated to operate at speeds below 28 mph (45 km/h) and are often used for first- and last-mile commuting, recreational purposes, and delivery services in densely populated areas. The market for LEVs has expanded rapidly due to growing urbanization, increasing traffic congestion, rising environmental awareness, supportive government policies promoting sustainable transport, and advancements in battery technology that have improved range, affordability, and performance. Key drivers include the shift toward micromobility solutions, the integration of smart features such as GPS and app connectivity, and the expansion of mobility services offering dockless e-scooter and e-bike rentals. However, the industry faces challenges related to regulatory uncertainty, safety concerns, infrastructure limitations such as inadequate charging stations and dedicated lanes, and issues surrounding battery disposal and supply chain constraints for critical components like lithium-ion batteries. Geographically, regions with high population density and proactive sustainability initiatives such as Europe, North America, and parts of Asia are leading adoption, while emerging markets show significant growth potential as urbanization accelerates and consumer acceptance increases. Competitive dynamics are intense, with a mix of established automotive manufacturers, specialized LEV producers, and tech startups vying for market share through innovation, pricing strategies, and partnerships with cities and mobility platforms.

The global Light Electrical Vehicle market size was estimated at USD 10500.0 million in

2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
