## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Light Field Display AR-HUD competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of light field display AR-HUD will reach 49k sets, with an average selling price of US\$2000 per set. Light field display AR-HUD is a new human-computer interaction solution that applies light field display technology to the in-vehicle HUD system. Unlike traditional HUDs, which only display flat images on the windshield, lightfield AR-HUD utilizes lightfield imaging principles to recreate the light information of a real three-dimensional space. This allows the driver to experience spatial depth and depth in the virtual image, avoiding visual fatigue caused by the misalignment between the driver's line of sight and the depth of the image. It can overlay navigation instructions, ADAS (Advanced Driver Assistance System) information, road signs, obstacle warnings, and other content on the real road scene, seamlessly integrating virtual information with the real environment and delivering an immersive and natural driving experience. With the development of intelligent connected vehicles and autonomous driving, lightfield AR-HUD is considered a key direction for future in-vehicle displays. Its advantages include a wide field of view, zero parallax, multi-viewing capability, and enhanced safety. However, it also faces challenges such as complex optical structure, high power consumption and cost, and difficult mass production processes. Currently, many global automakers and optical display companies are developing related technologies, with applications expected to begin in mid- to high-end models and gradually expand to a wider market.

The global Light Field Display AR-HUD market size was estimated at USD 98.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 24.60%

during the forecast period.
