Report Overview:

The light field is a vector function that describes the amount of light flowing in every direction through every point in space. The space of all possible light rays is given by the five-dimensional plenoptic function, and the magnitude of each ray is given by the radiance. Michael Faraday was the first to propose (in an 1846 lecture entitled "Thoughts on Ray Vibrations") that light should be interpreted as a field, much like the magnetic fields on which he had been working for several years. The phrase light field was coined by Andrey Gershun in a classic paper on the radiometric properties of light in three-dimensional space (1936).

The Global Light Field Imaging and Display Market Size was estimated at USD 161.41 million in 2023 and is projected to reach USD 200.72 million by 2029, exhibiting a CAGR of 3.70% during the forecast period.
