### Report Overview:

The liquid crystal display panel can be divided according to the size of the area, which is suitable for different fields. For the large-size LCD panel market, the main application areas are concentrated in LCD TVs, notebook computers and LCD monitors. For the small and medium-sized LCD panel market, the main application areas are concentrated in mobile phones, MP5, digital cameras, digital video cameras, GPS, tablet computers and other products. The term light guide plate comes from the English translation of Light Guide Plate, which is produced as a supporting LCD panel. Liquid crystal displays require backlight modules to show their brightness due to their non-self-luminous characteristics. During the development of backlight modules, light guide plates for key components have also begun to change differently with the needs of downstream products. The light guide plate is made of optical grade PMMA/MMA/PC, and then is made of high-tech materials with extremely high reflectivity and non-light-absorbing, and the light guide dots are printed on the bottom surface of the light guide plate with UV screen printing technology. The light emitted from the backlight source absorbed by the light guide plate stays on the surface of the light guide plate. When the light hits each light guide point, the reflected light will diffuse to various angles, and then destroy the reflection conditions and exit from the front of the light guide plate. The light guide plate can emit light evenly through a variety of dense and different light guide points.

The Global Light Guide Plate (LGP) Market Size was estimated at USD 546.93 million in 2023 and is projected to reach USD 656.88 million by 2029, exhibiting a CAGR of 3.10% during the forecast period.
