Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Light Load EMS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The light-load EMS uses a guide rail system suspended in the air to allow the electric trolley to run along a set path, realizing automatic transfer, caching, diversion and docking of workpieces or materials. Compared with traditional ground conveyor lines, the light-load EMS has the advantages of saving ground space, flexible layout, intelligent scheduling, stable operation, and suitable for clean environments. It is suitable for light-load (generally single-car load 50-200kg) production scenarios.

The global Light Load EMS market size was estimated at USD 663.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
