Report Overview

Light vehicle parking sensors are wireless parking sensors that can detect parking conditions in public or private parking spaces (single parking spaces or large parking lots) in real time. When the sensor detects that there is a vehicle in the parking space of the parking lot, the relevant data is transmitted to the control terminal that controls the data collection and transmission. The design of parking sensors for light vehicles is mainly to provide enterprises with a system to help manage indoor and outdoor parking spaces. It can also be used in the private sector, because the system has a unique vehicle-to-parking relationship, which can verify whether a vehicle parked in the parking space holds the right to park.
