Abstracts

A light vehicle turbocharger is an exhaust gas-driven forced induction device designed to increase the power output and efficiency of internal combustion engines in passenger cars, SUVs, and light trucks by compressing air entering the engine, allowing more fuel to be burned per cycle. Consisting of a turbine and a compressor connected by a shaft, it utilizes otherwise wasted exhaust energy to spin the turbine, which in turn drives the compressor to deliver denser air to the engine intake, resulting in improved performance, reduced engine displacement for equivalent power (downsizing), and enhanced fuel economy with lower emissions, particularly under real-world driving conditions where turbocharging helps meet stringent global regulatory standards.

The global Light Vehicle Turbochargers market size was estimated at USD 11200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
