Abstracts

Lighting transformers are electrical devices designed to convert the standard mains voltage (typically 120V or 230V AC) to a lower, safer voltage (commonly 12V or 24V AC or DC) required for operating low-voltage lighting systems, such as landscape lighting, track lighting, recessed fixtures, and certain types of decorative or specialty indoor and outdoor luminaires. These transformers not only provide voltage reduction but often incorporate features like overload protection, thermal cutoffs, and sometimes dimming capabilities or multiple output taps to accommodate varying cable lengths and load requirements, ensuring both operational efficiency and safety compliance in residential, commercial, and industrial applications.

The global Lighting Transformers market size was estimated at USD 895.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
