Abstracts

Lightweight portable printers refer to portable thermal printers with a net weight of less than 800 grams. The working principle is that a semiconductor heating element is installed on the print head. After the print head is heated and contacted with the thermal printing paper, the required pattern can be printed. The principle is the same as Thermal fax machines are similar. The image is created by heating, creating a chemical reaction in the film. This thermal printer chemical reaction occurs at a certain temperature. High temperatures speed up this chemical reaction. When the temperature is below 60°C, the paper takes a long time, even several years, to turn dark; when the temperature is 200°C, this reaction is completed in a few microseconds. Global core manufacturers of Lightweight Portable Printers include Zhuhai Quin Technology, Epson, Zebra, SATO and Toshiba TEC. North America is the largest consumption region, accounting for approximately 27% of the global market. In terms of type, direct thermal printer is the largest market segment, with a share of more than 70%. In terms of sales channel, the largest is offline sales, with a share of approximately 62%.

The global Lightweight Portable Printers market size was estimated at USD 80.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
