### Report Overview:

Lignin is the most abundant natural raw material available on Earth in terms of solar energy storage. It represents 30 per cent of all the non-fossil organic carbon on Earth. Lignin can be used as a green alternative to many petroleum-derived substances, such as fuels, resins, rubber additives, thermoplastic blends, nutra and pharmaceuticals. It is also known to be the only renewable source for industrial aromatics production. Lignin can be found in other plants, such as cereal straws, bamboo and bagasse, but it is in wood that lignin content is the highest in terms of weight: 20–35 percent in wood compared to 3–25 per cent in other lignin sources. Typically, kraft and organosolv lignins are two suitable candidates, whereas liginosulfonates will most likely lead to lower-value chemicals, which require more complicated processing.

The Global Lignin Products Market Size was estimated at USD 660.89 million in 2023 and is projected to reach USD 726.92 million by 2029, exhibiting a CAGR of 1.60% during the forecast period.
