## Abstracts

### Report Overview:

The Lime Maturing Equipment apparatus consists of putting quicklime into a preliminary ripening mixing tank which maintains the solution at a high concentration; the exothermic reaction resulting from mixing the quicklime with water produces heat and water vapour. The lime digestion process for the preparation of quicklime by means of an environmentally friendly dust extraction plant consists of crushing the quicklime lump with a crusher, the Eco-Lime Digester's quicklime digester is so easy to use, and after the first stage of ripening it automatically enters the second stage of puffing. The water vapour and dust produced are collected by a pulse dust collector. In the second stage the ash and slag are separated by full puffing and the coarse slag is discharged automatically from the slag outlet.

The Global Lime Maturing Equipment Market Size was estimated at USD 5582.79 million in 2023 and is projected to reach USD 9057.88 million by 2029, exhibiting a CAGR of 8.40% during the forecast period.
