### Report Overview

Uninterrupted Power Supply (UPS) is an electrical System that provides emergency power to a load when the input power source fails. Uninterrupted Power Supply (UPS) converts incoming AC to DC through a rectifier, and converts it back with an inverter. Uninterrupted Power Supply (UPS) differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitor, or flywheels. The on-battery runtime of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment.

Schneider-Electric, EATON and Emerson captured the top three revenue share spots in the Uninterrupted Power Supply (UPS) market in 2015. Schneider-Electric dominated with 2 percent revenue share, followed by EATON with 15.49 percent revenue share and Emerson with 9.28 percent revenue share.
