Abstracts

A Linear Absolute Encoder is a type of position sensor used to measure the exact position of a moving object along a linear path. Unlike incremental encoders, which only track changes in position from a reference point, linear absolute encoders provide an absolute position along the axis, meaning they can immediately provide the exact position even if the system loses power or is reset. The encoder continuously sends a unique position value for every point along the scale, offering high precision and reliability.

The global Linear Absolute Encoders market size was estimated at USD 572.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
