Report Overview

Linear Alkylbenzene (LAB) is a key intermediate chemical primarily used in the production of linear alkylbenzene sulfonate (LAS), a biodegradable surfactant widely employed in household and industrial detergents, cleaners, and personal care products. LAB is derived from the alkylation of benzene with linear paraffins, typically sourced from kerosene or naphtha, and is valued for its efficient cleaning properties, environmental compatibility, and cost-effectiveness compared to alternative surfactants. The market for LAB is heavily influenced by demand from the detergent industry, particularly in emerging economies where rising disposable incomes and urbanization drive higher consumption of cleaning products. Additionally, regulatory shifts favoring biodegradable ingredients in developed regions further support LAB adoption. However, the market faces challenges such as volatility in crude oil prices (affecting feedstock costs) and competition from bio-based surfactants. Key producers operate across North America, Asia-Pacific, and the Middle East, with Asia-Pacific dominating both production and consumption due to its large detergent manufacturing base. Sustainability trends and technological advancements in production processes are expected to shape future growth.

The global Linear Alkylbenzene (LAB) market size was estimated at USD 4322.76 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 1.60% during the forecast period.
